Wind Turbine Towers Arrive Ahead of Schedule

The first shipment of turbine towers has been offloaded to the site staging area, arriving ahead of schedule and continuing a strong trend of disciplined execution across the project. The towers are being safely offloaded and staged in preparation for installation. Each arrival marks a visible step forward as the project transitions from civil works to vertical construction.

Back to Basics: The Growing Case for Paper in Schools

A quiet but meaningful shift is happening in classrooms. Educators and school boards around the globe are re-examining the heavy reliance on screens and digital devices that defined the past decade of learning.

Mounting research, including studies supported by education associations, suggests that students retain information more effectively, develop stronger reading comprehension, and maintain better focus when working with physical paper. School boards have already begun limiting device use during instructional time, signaling a broader recommitment to the tactile, distraction-free experience that only print can offer. For paper manufacturers, this movement represents a meaningful and growing opportunity.

It's within this context that Elevation Book, Port Hawkesbury Paper's latest product development, is particularly well-positioned. Designed specifically for educational texts, workbooks, and novels, Elevation Book is engineered to meet the demands of high-volume print environments, such as school publishers and curriculum developers.

Port Hawkesbury Paper Completes A Successful Forest Management Audit with Zero Non-Conformance Issues

Port Hawkesbury Paper (PHP) is proud to announce another milestone in its commitment to responsible forest management. PHP has successfully completed its annual forest management audit with zero nonconformance issues, demonstrating our commitment to responsible practices and marking its 17th year of being Forest Stewardship Council® (FSC® C023189) certified and 11th year of Sustainable Forestry Initiative®

(SFI®) certification.

A rigorous audit conducted by Intertek, a third-party, independent certification company, confirmed that Port Hawkesbury Paper and its contractors not only meet but exceed the criteria set forth by the latest environmental and social standards in the sector. Within PHP's forest management area, 18% of the land-base is designated by the government as protected (above the 10% FSC minimum requirement), with PHP contributing to the identification of old growth forests included in this conservation network. Several additional areas noted in the audit included the comprehensive Annual Monitoring Report, dedicated field supervisors to ensure high levels of compliance, and collaboration with Indigenous organizations to create Indigenous Protected and Conserved Areas (IPCAs) within the forest management area.

This achievement solidifies PHP's role as a sustainable business leader and exemplifies its long-term commitment to safeguarding the environment and supporting local communities.
